

LINUX PROGRAMMERS

We are seeking C/C++ programmers to participate in the development of Linux based applications. You will take considerable part in designing, implementing and deploying software applications. You like to work in a highly dynamic and informal environment and focus more on results than on process. Our offices are located in Mølleparken, Oslo, Norway.

You possess skills and interests in some of these areas:

- » C/C++ programming
- » Linux development, including kernel and driver development
- » Embedded systems with realtime constraints
- » WEB based GUI development, HTML, Javascript, Ajax
- » IP protocols, including IPv6
- » Digital TV standards (DVB, MPEG, IPTV) and video codecs
- » Modulation techniques (QAM, COFDM, 8VSB, 8PSK)
- » RF hardware design
- » Database design and implementations
- » Hardware and FPGA development

We offer:

- The benefits of a small/medium sized company where everyone is important
- Flexible working hours with the possibility to work from home
- An environment with few limits where you can realize your full potential
- An international working environment with the possibility to participate in trade shows and exhibitions
- Competitive terms

Bridgetech designs, develops and manufactures advanced measurement and monitoring solutions for analyzing IPTV, cable, satellite and terrestrial signals.
